D-PDU API

Item number: 1.02.0280.00001

The Ixxat D-PDU-API is a VCI 4 (Ixxat Virtual Communication Interface) driver add-on, providing a D-PDU interface for many different Ixxat PC boards and platforms. Using the API, compatible applications of various manufacturers can be easily executed and used with Ixxat PC interfaces and platforms. This variant is a license of the multi-instance D-PDU-API add-on for the VCI driver.

Multi-instance D-PDU-API license for the Ixxat VCI

Features and benefits

Standardized interface

Supports a broad range of Ixxat PCIe and USB-based CAN interfaces, enhancing device connectivity options and offering a standardized communication interface.

Rapid development

Enables fast implementation of complex protocols, reducing time to market and development risks.

Up-to-date maintenance

Continuously updated to stay aligned with current protocol specifications, ensuring reliability.

Comprehensive support

HMS offers extensive technical support, code introduction services, and consulting throughout development phases, as well as implementation support.

D-PDU API

Identification and Status

Product ID	1.02.0280.00001
Country of Origin	Germany
HS Code	Not Applicable
Dual Usage	No

Physical Features

Contains Battery	No
