

Outstanding Reliability Keeps Your Scale Working

Vehicle Weighing

POWERCELL PDX load cells provide reliable weighing for heavy-capacity applications such as truck and rail scales. They are designed to perform in the toughest industrial environments and in the most forbidding climates, from the tropics to the polar regions.

No Junction Boxes

POWERCELL PDX load cells connect to one another in a simple network that eliminates the need for high-maintenance junction boxes. Load cells, cables, and connectors are watertight, sealing the entire network against failures caused by floods and normal scale cleaning.

Advanced Diagnostics

Unlike other load cells, POWERCELL PDX load cells have a predictive diagnostics system that constantly monitors the performance of each load cell and automatically corrects for changes in temperature and other environmental factors. It instantly alerts the scale operator to any potential problems in the scale system.

Rocker Column

An integral rocker-column suspension automatically aligns the load cell for accurate weighing. A debris shield keeps the lower end of the rocker column free of debris and stones that can affect weighing accuracy.

POWERCELL® PDX® Load Cell

The load cell uses proven POWERCELL technology that has demonstrated the ability to meet the real-world demands of vehicle weighing. It builds on past generations of POWERCELL load cells by adding advanced diagnostic capabilities. To provide the ultimate in reliability, the predictive diagnostics system continually monitors each load cell and its environment. It provides peace of mind by verifying that each load cell in a system is performing properly. The POWERCELL PDX load cell system is designed for proactive service, alerting you to potential problems before they occur. It helps avoid problems and, if problems do occur, enables service technicians to make the right repairs the first time and make them quickly.

POWERCELL® PDX® Load Cell Specifications

Parameter	Unit of Measure	Specification												
Trade Name		POWERCELL PDX												
Model Number		SLC820												
Load Cell Type		Column Compression, Digital Weight Processor (DWP)												
Part Number		42904882	42904883	42904884	42904885	42904891	42904892	30290638	72238150	72238147	30220694	30314022		
Rated Capacity (R.C.) ¹	t (klb, nominal)	20 (44.1)	30 (66.2)			50 (110.3)			90 (198.5)		200 (440)	300 (660)		
Sensitivity at R.C.	d @ R.C.	200,000	300,000			500,000			900,000		200,000	300,000		
Communication		Controller Area Network (CAN), Encrypted												
Communication Rate	kbit/sec	125												
Effective System Update Rate	Hz	83 (with 4 cells), 50 (with 6 cells), 25 (with 14 cells), 15 (with 24 cells)												
Effective System Synchronous Update Rate	Hz	40 (with 10 cells)

	Min. Dead Load	kg (lb, nominal)	50 (110.3)											

¹ R.C. = Rated or full capacity as specified on the data plate.

² Certified according to approval agency or notified body (third party).

³ Operating temperatures below -40°C/-40°F require the load cell to be continuously powered.

⁴ The combined error of span, linearity error, and hysteresis will not exceed 80% of the error limits for OIML R60. OIML R60 C3 error limits are typically 60% tighter than the HB44 10K III L-M allowable tolerance.

⁵ See certificate for complete information.
